SUMMARY

Senior Product Manager with a Mechatronics Engineering background, M.Sc. in Computer Engineering (AI focus), and 4+ years of experience leading 0-to-1 products in deep-tech environments. Expert at owning product roadmaps, deploying enterprise-grade features, scaling B2B platforms from concept to launch under strict operational constraints., and aligning engineering roadmaps with aggressive GTM and ARR targets.

Portfolio: [Case Studies Portfolio](#)

EXPERIENCE

Knowcap.ai

Senior Product Manager (Advisory)

Egypt
Jan 2026 – Present

- Own product vision, strategy, and delivery for a pre-seed AI startup, leading and managing the product team.
- Restructured product backlog of 100+ items, exploiting prioritization and backlog management frameworks, to accelerate delivery toward 2026 launch.
- Defined B2B and B2C monetization strategies and tiered pricing architectures, mapping a clear path to \$200K ARR.
- Lead competitive and category analysis, repositioning the product from “AI docs” to a “verified source of truth” to differentiate in a commoditized market.
- Drive launch strategy, defining an invite-only rollout to protect brand credibility while product quality stabilizes.
- Conduct an end-to-end AI capability assessment across RAG, Gemini/GenKit integration, embeddings, and multimodal processing, documenting scalability enablers (service-layer architecture, async queues, and credit metering).
- Diagnosed critical UX latency and Arabic ASR model gaps (70% precision, 55% recall) to drive targeted performance improvements.

Scalixx, Kulsys Technologies

Technical Product Manager

Egypt
July 2025 – Present

- Own full product lifecycle as the First Product Hire of Scalixx, a multi-million-dollar RFID-enabled automation suite, directing product and engineering, leading roadmap and requirements under tight resource constraints.
- Shipped 5 new modules and over 25 major forms, expanding platform functionality across manufacturing, inventory, and real-time automation.
- Used customer feedback and market research to lead the redesign of Scalixx into a configurable multi-tenant platform, defining vision, and prioritization to support scalable deployments.
- Established agile processes across engineering and implementation teams (Jira, sprint planning, documentation standards), achieving 100% adoption that greatly increased development velocity.
- Built product standards for UX, documentation, and technical support, which led to improving usability, reducing support friction, and laying the foundation for a scalable product.
- Leading enterprise GTM and cross-sector expansion, winning new pilots (such as Mansour Automotive) and expanding into non-garment sectors.
- Collaborated closely with marketing to reposition Scalixx’s product narrative and value proposition, enabling penetration into new markets and aligning brand messaging with product strategy.
- Assessed feasibility of applying AI/ML approaches within RFID-based industrial workflows (anomaly detection, predictive automation), and deliberately prioritized deterministic, rules-based systems due to real-time latency, and operational reliability and costs constraints, while defining criteria for future AI adoption as data maturity improves.

Microsoft

Product Engineer, Dynamics 365 F&O Supply Chain Management

Remote, EMEA
April 2024 – May 2025

- Drove product improvements through cross-functional collaboration with stakeholders, product groups, and engineering teams to refine user stories and validate feature priorities aligned with product roadmap and customer feedback, leading to 15+ new features shipped and thousands of satisfied customers.
- Leveraged Microsoft Copilot to customize and extend Dynamics 365 SCM functionality using X++, Power Platform, Azure DevOps services, and integration tools, enabling AI-assisted workflows while operating within enterprise governance, security, and extensibility constraints.
- Maintained the highest CSAT score for 9 consecutive months across a 23-member team by translating customer feedback into roadmap priorities and product improvements, strengthening customer trust and adoption.
- Served as a key liaison between Product Managers, engineering teams, and key stakeholders to translate complex supply chain requirements into actionable technical specifications and user stories for development, ensuring alignment with strategic product goals.

University of Hertfordshire in Egypt

Principal Technical Officer (Product Owner)

Cairo, Egypt
Nov. 2023 – Mar. 2024

- Owned end-to-end delivery of a centralized lab scheduling and inventory management system, gathering stakeholder requirements, managing the product backlog, and implementing and overseeing deployment via Microsoft 365 and Power Platform to improve labs resource utilization by 320%.
- Led cross-functional engineering teams across 9 laboratories, ensuring operational excellence, safety compliance, and timely operations for academic and research activities.
- Directed strategic resource management, including inventory, procurement, and vendor coordination, to optimize budget alignment and ensure continuous availability of critical assets for development.
- Provided hands-on mentorship and guidance for AI and robotics projects within the Mechanical and Mechatronics Engineering Department.

NUBAQ

Real Estate Sales Team Leader Property Consultant

Giza, Egypt
Jul. 2023 – Oct. 2023
Feb. 2023 – Jun. 2023

- Led and coached a team of 9 real estate agents, providing ongoing training, performance oversight, and sales strategy guidance to drive individual and team success.

- Designed B2B business development and sales strategies by analyzing market trends and client feedback, aligning tactical execution with customer needs to increase conversion by 35%, directly contributing to business value.
- Established relationships with prospective clients and business stakeholders through consultative selling, strategic needs analysis, and market trends.

Cairo University Eco-Racing Team (Global Autonomous Vehicle Competition)
Autonomous AI Driving Program Manager

Giza, Egypt
Jul. 2021 – Sep. 2022

- Owned the end-to-end product lifecycle of an autonomous driving system, framing the problem, defining success metrics, and translating competition and safety constraints into clear system-level requirements for perception, localization, planning, and control.
- Delivered a 2nd-place national finish, validating system performance, robustness, and cross-team execution under competitive and real-world testing conditions
- Led cross-functional delivery of a competition-grade AI system under strict real-time, safety, and hardware constraints, leading 23 engineers across software, AI, hardware, and integration tracks.
- Designed and oversaw the autonomous driving system architecture design, defining comprehensive specifications for hardware and software components, ensuring alignment with the product vision.
- Managed roadmap, milestones, and risk mitigation, resolving integration dependencies across perception, mapping, planning, and control to ensure on-time delivery and operational readiness.

Autonomous AI Driving Software Engineer

July 2020 - June 2021

- Developed core AI perception and localization capabilities, applying SLAM techniques (Gmapping, Hector-SLAM, Laser Scan Matching) to generate accurate, real-time environment maps under sensor noise and motion uncertainty.
- Collaborated closely with hardware and control teams to resolve AI-system integration challenges, balancing model performance with real-time execution and safety requirements
- Executed sensor fusion (stereo camera, 3D-LiDAR, IMUs) to enable real-time object, pedestrian, lane, and obstacle detection.
- Contributed to a top-5 global finish in Shell Eco-Marathon’s Autonomous Worldwide Programming Competition, demonstrating successful AI system integration and validation at scale.

EDUCATION

Master of Science, Computer Engineering, Ain Shams University (*Currently pursuing*)

Cairo, Egypt

- Concentration in Artificial Intelligence

Bachelor of Engineering, Mechatronics Engineering, Cairo University

Giza, Egypt

- GPA: 3.2 / 4.0
- Graduation Project: Inspection Operations in Confined Spaces Using Continuum Robots
- Awarded 2nd place in CUFE’s Graduation Projects Competition

CERTIFICATIONS

<i>In Progress</i>	IBM RAG and Agentic AI Professional Certificate, IBM, Coursera
Dec. 2025	<u>Microsoft AI Product Manager Professional Certificate, Microsoft, Coursera</u>
May 2025	<u>Professional Scrum Product Owner I (PSPO I), Scrum.org</u>
Feb. 2024	<u>Business Strategy Specialization, UVA Darden School of Business, Coursera</u> • Capstone Project: Space X Strategic Plan

SKILLS

Product Management & Agile	Backlog Management, Business and Product Strategy, Product Road-mapping, Agile Methodologies, AI Product Framing, Model Evaluation and Selection, LLM-assisted Workflows, Prompt Engineering, Market Research, A/B Testing, Stakeholder Management
Technical & Analytical	Python, AI/ML Frameworks, MATLAB, C, OpenCV, ROS, Linux, Power BI, Data Analysis
Collaboration & Leadership	Cross-functional Team Leadership, Negotiation, Building Relationships, Collaboration, Facilitation, Sales Techniques
Tools	Miro, Jira, Confluence, Figma, Trello, Notion, MS Dynamics 365 F&O, Power Platform
Languages	Arabic, English
